

Adashi C&C

INCIDENT COMMAND SOFTWARE LIKE NEVER BEFORE

Adashi C&C is a robust incident command system, combining situational awareness and resource management into one platform for fire and rescue services and commanders. Adashi C&C gives commanders an interactive dashboard for effective decision-making and asset mobilisation. The Adashi C&C solution is designed specifically to meet the needs of the UK Fire and Rescue Service. Adashi C&C provides situational awareness, real-time collaboration, tactical planning, tracking, management, communication, logging, and reporting.

SYSTEM FEATURES

- Seamless integration to command and control
- Map-based intelligence
- AVL of other responding appliances
- Critical information dashboard
- Real-time collaboration
- Enterprise platform
- Up-to-date wind and weather data
- Instant logging of all activities
- After-incident reporting
- Built-in risk assessment
- Intuitive touch-screen interface
- Integrated with the Adashi ecosystem
- Web independent - internet not Required

Adashi C&C

Locally-Stored Information

Adashi C&C works on its own independent server, regardless of external cellular or internet service. Even when major networks fail or coverage does not extend to the incident location, first responders using Adashi C&C can access key mission-critical information locally-stored on the server and communicate with other units at the scene.

End-to-End Solution

Adashi C&C integrates with various public safety systems, including Gartner Technologies' rostering platform and Adashi FirstResponse MDT software to provide an end-to-end solution for our users. With the combined Adashi suite of products, public safety agencies have a complete incident management tool to effectively handle emergencies at every step of the process.

Intelligence & Coordination

Control Room Integration

Upon dispatch mobilisation, data is automatically transferred. Critical information, including address/coordinates, incident notes, contact information, and responding appliances, is available to the incident commander.

Drag-and-Drop Organisational Chart

When an incident is initiated, a flexible incident command org chart allows you to drag and drop your resources to groups and assignments. Organisational charts expand as the incident progresses. Maintain critical span of control at each level with ease.

Pre-plans and Documents

Access and view pre-plan data and documents such as building plans, response plans, hydrants, hazards, and photographs. These pre-defined items of interest will appear automatically when the associated address or selected perimeter is chosen by you or your computer-aided dispatch (CAD). Annotate the pre-plan with crew entry points, icons, tasks, and responsibilities.

All-Hazards Database Management

Add and modify hazard categories, types, and descriptions as needed to fit your organisation's specific needs. Add standard operating guidelines, local response plans, and other critical data to specific incident types. Populate your maps with automated airborne hazard prediction and map visualization of hot/warm zones, isolation distances, and evacuation areas based on real-time weather.

Benchmarks and Checklists

Customizable benchmarks and checklists are available at the touch of a button. All activities are time-stamped and recorded in the log to facilitate after-incident reporting.

Risk Assessment

Access important information about existing hazards to perform dynamic risk assessment. Adashi C&C also provides up-to-date information to facilitate accurate analytical risk assessment as the incident grows or progresses. Use Adashi C&C to track all activities at the incident ground and change strategy or implement additional safety controls as required by the nature of the incident.

Collaboration & Common Operating Picture

Map-Based Management

With multiple map views at your fingertips, manage your incident directly on a map. Choose from your Esri layers, Google, Bing and Pictometry (where available). Draw on the map, view and place resources on a map, and share maps for real-time situational awareness and a common operating picture.

Resource Management and Tracking

Full AVL (Automatic Vehicle Location) allows incident commanders to see, communicate, and re-route appliances in real time. Resources in the field instantly receive a pop-up notification of messages and the new assignment. Easily drag and drop roles and resources on the map to reflect either their current or planned location and include messages with their new assignments.

Tactical and Strategic Planning

Use the electronic tactical worksheet to develop a detailed Incident Action Plan, and assign resources directly onto the map. Drag and drop to efficiently manage roles and resources within the incident display. Define your strategy and game plan with all connected resources.

Collaboration

Get everyone on the same page fast. Use annotation to share a single encompassing view of the incident in real time with other connected users. Personnel can share information/photographs and collaborate in the collection of accurate and timely data.

Digital Planning Board

Draw and drag icons on the map to mark boundaries, define zones of approach, identify objectives, notate hazards or define sectors, staging areas, and more. Draw on maps, photographs, pre-plans, and other media. Share your strategy with all connected resources.

Adashi Systems is a Yorkshire Purchasing Organisation (YPO) approved supplier. Public sector organisations across the UK can procure Adashi's incident command software directly - no OJEU tender required. Learn more via the YPO website at www.ypo.co.uk or by searching framework number 000752 on the UK Government Contracts Finder site. www.gov.uk/contracts-finder.
