### Adashi Rollcall 17.9 Release Notes

## **1. Introduction**

This document communicates the changes and fixes made in this release for Adashi RollCall version 17.9. It also documents known problems and workarounds if applicable.

## **2. About This Release**

This is a maintenance release containing numerous bug fixes and improvements to existing features.

## **3. Compatible Products**

This product has been tested on the following platforms or with the following products:

Google Chrome v109 and newer on windows 10, 11, 8.1

## **4. Release/Deployment Process**

An Adashi Systems tech support representative will contact the person designated as your primary contact prior to the deployment. Your site will be placed in maintenance mode and will be unavailable during the deployment. Deployments typically take less than 30 minutes, at which point the site will be reactivated, and the tech support representative will notify your contact that everything is functional.

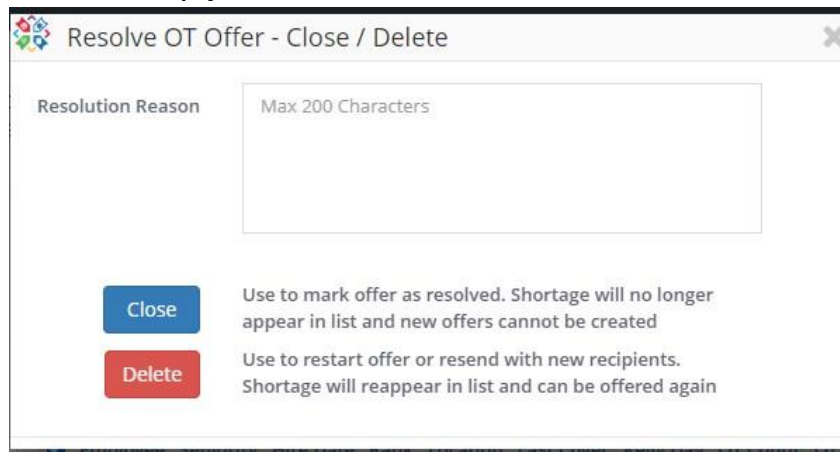

## **5. New/Changed Features**

### User Interface Updates

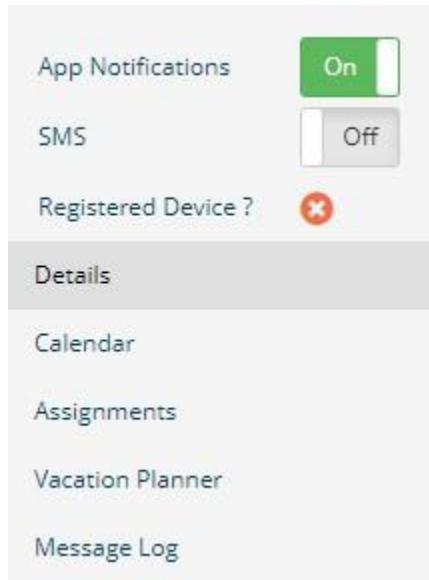

- The ‘select all’ functionality on the ‘bookings’ page and the overtime popup window has been extended to more filters to make it easier to find the bookings and offers you are looking for.

- The ‘close offer’ and ‘delete’ buttons for overtime offers have been consolidated into a ‘resolve’ button that will launch a popup that explains the two options, close and delete, explicitly. This does not change any functionality, just UI.

- **Notifications** An indicator has been added to user profiles to show if they have an active mobile device registered.

- When employees request trades, there will now be a pending booking record created.
- The records for bookings and shift adjustments have been consolidated, so there should only be one record for each, rather than a record for every interaction with either.
- Updates have been made to the message log that should make it easier to identify who sent messages, when they were sent, how they were sent, and if they were received.
- Redundant/excessive messages related to contract changes have been removed, leaving only the essential notifications related to any change in an employee's contract.

### **Overtime Tracking**

- Overtime total tracking has been updated to only include OT worked, not pending. It should now only consider today's date and the past, not any future overtime.

## 6. Resolved Defects

The following defects have been resolved in this release:

- Several issues where employees were showing up in duplicate on OT offers, or not showing up at all. [OBJ]
- Calendar issues that were showing off duty employees working.
- An issue that showed pending trade requests alongside the approved trade.
- Employees not showing up while searching through booking codes.
- Several other minor bugs.

## 7. Known Bugs and Limitations

### 7.1. General Note

In the Admin section of the program, accessible only with proper permissions, there is a menu item called Dashboard. Modifying items here can lead to incorrectly altered department data and other errors. Adashi recommends consulting with IT Support rather than attempting to interact with this section.

### 7.2. Rollback Procedure

In the event of a significant issue with the upgrade, Adashi has a system in place to revert a site to a previous working version. Unfortunately, this means that any new data created in Rollcall between the time of the upgrade and the rollback will be lost. A rollback is a worst-case scenario, and Adashi will do everything possible to prevent such an option from becoming necessary.

## 8. Documentation

As part of your department’s purchase of Adashi Rollcall, a set of training videos is made available for you and your employees to learn to use the system. The videos can be found at:

<http://www.adashi.com/rollcall-customers/>

If there is further need for explanation or assistance, please contact us at (1) 877.563.9980 during normal business hours and we will be happy to answer your questions, or if required, set up a call to address your needs in person.
